Mr. Speaker, I rise to recognize the outstanding contributions that University of Miami researchers are making to America’s health care.

In becoming one of the leading research universities in the country over the last decade, the University of Miami has developed a pool of world-class talent and advanced infrastructure that is helping lead the science and tech boom that is shaping South Florida’s future for the better.

Among the exciting research breakthroughs taking place in Coral Gables is the work of the Lampidis lab at the Miller School of Medicine.

This is where Dr. Lampidis and his associates have found that, when given in combination with a common cholesterol medication, nontoxic 2-DG therapy effectively kills tumors without the use of harsh, conventional chemotherapy drugs.

Mr. Speaker, I congratulate Dr. Lampidis and everyone at the University of Miami for their efforts to improve our community, our Nation, and our world.
